#### PCI Configuration Guidelines

- Modules designed for 5.0 V signaling and 33-MHz bus speed can only operate in 5.0 V/33-MHz slots
- Modules designed for 3.3 V signaling and 66-MHz bus speed can only operate in 66-MHz slots
- Universal PCI modules can operate in all slots (3.3 V and 5.0 V)
- Universal PCI modules operating at 33 MHz placed in a 66-MHz slot will reduce the entire hose to operate at 33 MHz
- Universal PCI modules capable of operating at 66 MHz when placed in a 33-MHz slot will operate at 33 MHz
- PCI hot-plug ready slots are designed to enable PCI modules to be added or removed while the system is powered and running. Subsequent operating system versions above Tru64 UNIX V5.1A and OpenVMS V7.3 will provide support for hot-plug PCI functionality

#### PCI Module Descriptions:

- PCI modules listed in this document as 33 MHz or 66 MHz refer to the module's maximum PCI bus speed.
- Modules that can only operate at 5 V are designated as 5 V – 33-MHz modules.
- Universal PCI modules are designated as 3.3/5 V and can be installed into 33-MHz or 66-MHz slots.

AlphaServer ES45 systems provide four I/O hoses, each is configured differently as illustrated in the following charts for Models 1B, 2B, and 3B.

### Options

#### Step 2 – Additional CPU Modules – Optional

<ul style="list-style-type: none"> <li>One CPU included, three additional CPUs are supported</li> </ul>	
SMP upgrade, includes one 68/1000-MHz CPU with 8-MB cache and Tru64 UNIX SMP license	KN610-DB
SMP upgrade, includes one 68/1000-MHz CPU with 8-MB cache and OpenVMS SMP license	KN610-DC

#### Step 3 – Memory – Optional

<ul style="list-style-type: none"> <li>Systems include one memory option</li> <li>Maximum four memory options (total of 16 DIMMs) for Model 1B (one per array)</li> <li>Maximum eight memory options (total of 32 DIMMs) for Models 2, 2B, and 3B (two per array)</li> <li>AlphaServer ES45 system includes two memory buses</li> <li>AlphaServer ES45 system includes two arrays per bus</li> <li>For Models 2, 2B, and 3B, memory options within an array must be identical</li> </ul>	
512-MB memory option (4 x 128-MB DIMMs)	MS620-AA
1-GB memory option (4 x 256-MB DIMMs)	MS620-BA
2-GB memory option (4 x 512-MB DIMMs)	MS620-CA
4-GB memory option (4 x 1024-MB DIMMs); order for Model 2 systems only	MS620-DA
4-GB memory option (4 x 1024-MB DIMMs); order for Model 1B, 2B, and 3B systems only	MS620-DB

Memory performance considerations:

- When two or more memory options are installed, both buses are utilized, enhancing system performance
- Interleaved operations reduce the average latency and increase the memory throughput. When all four arrays are populated with the same amount of memory, read-write operations are four-way interleaved, enhancing system performance.

The following examples illustrate different ways of configuring a 4-GB system. Case C yields the best performance and is the recommended method for configuring memory on an AlphaServer ES45 system.

Base System (one memory option included)	Memory Options	Total Memory	Total DIMMs	Performance
Case A - DA-68DBA-DA (MS620-DB)	None	4-GB	4	Good
Case B - DA-68DBA-CA (MS620-CA)	MS620-CA	4-GB	8	Better
Case C - DA-68DBA-BA (MS620-BA)	MS620-BA + MS620-BA + MS620-BA	4-GB	16	Best *

**NOTE:** \* = Operating system and application dependent. Up to an 18% performance enhancement has been measured in Case C over Case A.

#### Step 4 – Additional Power Supply – Optional

One Power Supply	Standard with Model 1B, 2B, and 3B systems, provides system support for: <ul style="list-style-type: none"> <li>Two CPUs</li> <li>One disk drive cage (up to six disk drives)</li> <li>Four memory options (up to 16 DIMMs)</li> </ul>

Third Power Supply	Optional – Provides (N+1) power redundancy system support for two power supply configuration
<ul style="list-style-type: none"> <li>Additional power supply ordered with a tower system requires an additional country-specific power cord</li> <li>Pedestal system and Rack kit include three internal IEC/IEC power cords regardless of the number of power supplies ordered</li> </ul>

### Step 11 – Storage Devices – Optional

#### UltraSCSI Configuration Rules

- UltraSCSI configurations require UltraSCSI components (controllers, adapters, shelves, disks, and cables)
- UltraSCSI adapters and RAID controllers support UltraSCSI disks at UltraSCSI speeds in UltraSCSI shelves
- Mixing faster SCSI devices with slower SCSI devices will slow that entire SCSI bus to the slower speed.

#### Tape Drives

- Tape drives require single-ended UltraSCSI adapter and country-specific power cord
- For more information see <http://www.compaq.com/products/storageworks/sitemap.html#tapedrives>

### Configuring Information

- Up to two PCI-to-System Area Network adapters (CCMAB-AA) are supported in a single system.
- For two to eight system nodes, order one CCMHB-AA hub; order one CCMAB-AA adapter and one BN39B-04 or BN39B-10 cable for each system node; make connections from the CCMAB-AA in each system to the CCMHB
- CCMHB-AA includes four CCMLB-AA line cards and supports up to four nodes; expansion up to eight system nodes can be achieved by adding up to four CCMLB-AA line cards.
- If two CCMAB-AAs are configured in each system, a second CCMHB-AA is required.
- If nodes must be separated by a distance longer than standard copper cables allow the CCMFB option converts the output of the standard CCMAB controller or CCMLB line card to single-mode fiber optic cable. The fiber optic connection may be up to 2,000 meters long between two CCMAB controllers connected in virtual hub mode, or 3,000 meters between a CCMAB controller and a CCMHB hub. (The connection from the CCMHB hub to a second system may also be 3,000 meters.) The CCMFB option requires a second PCI slot in the system from which it draws power only. It is normally connected to the corresponding CCMAB controller with the short BN39B-01 cable. The CCMFB is also used in the CCMHB hub where it occupies a slot normally used by the CCMLB line card, limiting expansion to four radial fiber optic connections.
- CCMHB-BA hub expansion box provides additional slots for up to eight fiber optic connections. Two standard length single-mode fiber optic cables are available (BN34R-10 and BN34R-31); however, users normally provide this fiber optic connection. Fiber optic connectivity is completely transparent to the systems using it and has no performance impact.
